OPENCLAW — Whiteboard, redrawn

Every box from your whiteboard, full text visible. Each card lists what it **needs** (depends on) and what it **feeds** into. Read top-to-bottom: NOW → FUTURE.

2029–30 · IPO / Sale / Full OS

RIGHT NOW · MAY 2026 · $1,000 BUILD

Telegram bot → whitepapers

What the client wants today. He talks to his phone, gets a whitepaper back. Single-tenant. Lives on one Hostinger VPS.

Client (phone)

END USER

The client opens Telegram on his phone, speaks or types a request, receives a finished whitepaper.

NEEDS Telegram bot reachable
FEEDS —

Telegram bot

FRONT DOOR · VOICE + TEXT

Telegram bot registered via @BotFather. Accepts voice messages and text. Sends finished docs back as files.

NEEDS Hostinger VPS webhook
FEEDS Whisper STT, LLM

Hostinger VPS

KVM · UBUNTU LTS

Single Hostinger KVM VPS runs the orchestrator process, holds keys, terminates SSL. Fixed monthly price — no surprise egress bills. Replaces the earlier GCP idea.

Audio input

GEMINI NATIVE · OR WHISPER.CPP SELF-HOSTED

Gemini takes audio directly — no separate transcription step. For full self-hosting, whisper.cpp runs on the VPS (open source, no OpenAI dependency). Either way, voice in, transcript out.

NEEDS Hostinger plan · domain (Cloudflare) · SSL
FEEDS everything else

NEEDS Telegram bot · Gemini API or whisper.cpp on VPS
FEEDS LLM

LLM

GEMINI · MINIMAX · KIMI K2

Core intelligence. **No OpenAI, no Claude** (client direction — competitor + OAuth restrictions). Gemini 1M+ context as primary; MiniMax and Kimi K2 (open weights) as alternatives and self-host targets.

NEEDS Audio input or text input · API key or self-hosted weights
FEEDS Whitepaper generator

Whitepaper generator

PROMPT + TEMPLATER

Specialized prompt + post-processing that turns the LLM response into a whitepaper outline: title, exec summary, sections, conclusion.

NEEDS LLM
FEEDS Document output

Document output

.DOCX · .PDF

Renders the whitepaper into a downloadable .docx and .pdf. Uploaded to Cloud Storage, signed URL returned via Telegram.

NEEDS Whitepaper generator · Cloud Storage
FEEDS client (back via Telegram)

OUTPUT + LLM CONTEXT FLOWS INTO THE COACHING LAYER

RIGHT NOW IN FLIGHT · MEMORY + COACH

Memory + coach modes · "translates my natural language into understandable"

The bot stops being amnesiac. Obsidian Memory remembers past conversations; the S.O.P translator turns rambling speech into clean action items. Coach personas sit on top.

Obsidian Memory

HOSTED ✓

Hosted Obsidian vault keeps every prior conversation, whitepaper, and rule. The LLM gets relevant context injected on each request.

NEEDS Hostinger VPS · LLM
FEEDS Auto-doc · Act.md · DB pipelines

Auto-doc pipeline

WHITEPAPERS → DOCS LIBRARY

Every whitepaper produced gets indexed, tagged, cross-linked. Becomes a living documentation library inside Obsidian.

NEEDS Whitepaper generator · Obsidian Memory
FEEDS Applications 26 · Landing page

S.O.P translator

NL → ACTIONABLE STEPS

"Translates my natural language into understandable." Takes rambling input, produces clean standard-operating-procedure style output.

NEEDS LLM · Obsidian Memory
FEEDS Business coach · Disability coach

Business coach mode

PERSONA

"How to say something, how to..." — business-context coaching persona built on the S.O.P translator.

NEEDS S.O.P translator
FEEDS Super App

Disability coach mode

PERSONA

Accessibility-focused coaching persona. Same engine as the business coach, different system prompt and reading level.

NEEDS S.O.P translator
FEEDS Super App

Landing page

MARKETING SURFACE

Public landing page describing OPENCLAW. Sign-up funnel for early access.

NEEDS Applications 26 catalogue
FEEDS Super App user funnel

Applications 26

PUBLIC + PRIVATE APPS

Catalogue of small applications (auto-whitepaper being the first) — some public, some private. The board's "Applications 26 → Auto White paper Public/Private".

NEEDS Auto-doc pipeline
FEEDS Landing page

MEMORY + S.O.P UNLOCK THE MULTI-AGENT ROLE HARNESS

RIGHT NOW IN FLIGHT · AGENT HARNESS

Act.md role harness · Chancellor → Priest

The middle column of your board, made real. Four roles with dos-and-donts in Act.md, a delegation router under them, and subordinate Gemini agents for research and code.

Act.md rules

DOS & DONTS · EXTRA PARAGRAPHS

A single markdown file per role defining authority, intent, and constraints. Loaded into

Chancellor

RULER · AUTHORITY

Top-level role. Approves what the system is allowed to do. Final say on contested decisions.

every relevant agent context.

NEEDS Obsidian Memory
FEEDS all four roles

NEEDS Act.md (chancellor)
FEEDS Delegation router

Secretary

"WANT DONE"

Intent role. Captures what the user actually wants accomplished and breaks it into tasks for the router.

NEEDS Act.md (secretary)
FEEDS Delegation router

Preacher / Clergy

ALIGNMENT

Alignment role. Checks every plan against principles before it executes — your "alignment" note on the board.

NEEDS Act.md (preacher)
FEEDS Delegation router

Priest

DOS & DONTS

Rule-enforcement role. Knows the operational constraints (legal, safety, brand) and vetoes violations.

NEEDS Act.md (priest)
FEEDS Delegation router

Delegation router

ORCHESTRATOR

Takes intent from Secretary, checks Chancellor/Preacher/Priest, then fans work out to the right subordinate agent. The board's "DELEGATION TO OTHER AGENTS".

NEEDS 4 roles · DB pipelines
FEEDS Research · Code · Walled garden · Super App

Research agent (Gemini)

SUBORDINATE

Gemini-backed agent specialized for research tasks — your board's "RESEARCH (gemini)".

NEEDS Delegation router
FEEDS Whitepaper generator · Super App

Code agent (Gemini)

SUBORDINATE

Gemini-backed agent specialized for code generation and edits — your board's "CODE (gemini)".

NEEDS Delegation router
FEEDS Walled garden builds

DB code pipelines

DEV · SANDBOX · MAIN · PRODUCTION

Four-stage code+database pipeline so the agents can build, test, and ship without breaking production. Lives on Hostinger VPS for now.

NEEDS Hostinger VPS
FEEDS Delegation router · Walled garden

LATER 2028 · WALLED GARDEN + HARDWARE

Walled garden · on-prem hybrid · "saferoom within a house"

Rebuild every external dependency inhouse — Apple's model. Cloud workloads migrate to Proxmox/TrueNAS on your own hardware. The board's "On premise ✓" decision lands here.

Walled garden

REBUILD ALL SW INHOUSE · APPLE MODEL

"Rebuild all software needed to build it inhouse for no dependency." Each external service gets an internal replacement.

NEEDS Code agent · DB pipelines · Delegation
FEEDS Boot OS · Wearables · Paperclip stack · Full OS

Boot OS

"SAFEROOM WITHIN A HOUSE"

High-security boot operating system. Sensitive workloads boot into the saferoom; everything else runs in the main house.

NEEDS Walled garden
FEEDS Full OS

Proxmox / TrueNAS

VIRTUALIZATION + STORAGE

Proxmox handles VMs, TrueNAS handles storage. The hosting fabric for the on-prem move.

NEEDS Walled garden
FEEDS Hypervisors

Hypervisors

TYPE 1 + TYPE 2

Type 1 (bare-metal) for production VMs; Type 2 (hosted) for developer laptops — your board's "3 → 2 in one laptop · linux".

NEEDS Proxmox / TrueNAS
FEEDS On-prem hybrid arch

On-prem hybrid arch ✓

ON-CLOUD OR ON-PREMISE

The checkmark on your board. Public-facing services stay on cloud; sensitive workloads move on-prem behind the saferoom.

NEEDS Hypervisors · Boot OS
FEEDS Super App

Wearables · Linux

HARDWARE EXTENSION

Linux-based wearable form factor for the coach modes. The board's "2 wearables · 1 linux".

NEEDS Walled garden
FEEDS Super App

Paperclip / OpenStack / OpenShift

INTERNALIZED CLOUD STACK

Your board's external dependency list — by this phase, internalized inside the walled garden as part of the no-dependency play.

NEEDS Walled garden
FEEDS Full OS

↓

EVERYTHING ABOVE CONVERGES INTO THE PRODUCT + FINANCIAL ENDGAME

FUTURE 2029–30 · SUPER APP · IPO · SALE · FULL OS

OPENCLAW Super App → Remi · Hermes → IPO → Sale → Full OS

The right-hand timeline on your board. Super app first, product spin-outs from it, then financial event, then the OS as the final form.

OPENCLAW Super App

PRODUCT

The end-state consumer product. Bundles agent harness, coach modes, memory, and document generation into one app.

NEEDS Delegation · Coach modes · On-prem hybrid
FEEDS Remi · Hermes · IPO

Remi

SPINOFF PRODUCT

Standalone product spun out of the super app — labelled top-right on your board.

NEEDS Super App
FEEDS IPO revenue mix

Hermes

SPINOFF PRODUCT

Second spinoff product — labelled top-right on your board.

NEEDS Super App
FEEDS IPO revenue mix

IPO

FINANCIAL EVENT

Public offering once the super app and spin-outs have demonstrable revenue. From your board's timeline.

NEEDS Super App · Remi · Hermes traction
FEEDS Sale option

Sale

EXIT · 2030 MARKER

Exit event in 2030 on your timeline. Sale of the holding company or the platform; OS spins off independent.

NEEDS IPO completed
FEEDS —

Full OS

FINAL FORM

The end node on your board — the full operating system, walled garden made complete, released as the lasting artifact.

NEEDS Walled garden · Boot OS · Paperclip stack
FEEDS —

DEPENDENCIES EXTERNAL SERVICES · VENDORS · AI MODELS

Dependencies & vendors

Every external service the system relies on, grouped by category. Anything banned by the client is marked. Self-hosted alternatives noted where they exist — the LATER walled-garden phase replaces most of these.

HOSTING

Hostinger VPS PRIMARY HOST

KVM VPS, fixed monthly pricing, no egress surprises. Single box runs orchestrator, bot, audio, doc generator.

DOMAIN & DNS

Cloudflare Registrar REGISTRAR + DNS

At-cost domain registration, free DNS, automatic SSL, DDoS protection. Standard pick — no markup, no upsell.

NOW SOON MID LATER FUTURE

NOW SOON MID replaced by Proxmox/TrueNAS in LATER

Proxmox VE + TrueNAS SELF-HOSTED, LATER

Owned hardware in the LATER phase. Type 1 hypervisor + storage replace the VPS.

LATER FUTURE

AI MODELS

Gemini HOSTED API · PRIMARY

1M-2M context window, native audio + video input — handles voice without a separate transcription step.

NOW SOON primary intelligence

MiniMax HOSTED · LARGE CONTEXT

Long-context alternative. MiniMax-01 / Text-01 weights available for self-hosting.

SOON MID alternate provider

Kimi K2 (Moonshot AI)

OPEN WEIGHTS · SELF-HOST TARGET

Open model — the long-term plan is to self-host on owned hardware. Aligns with the walled-garden bet.

MID LATER FUTURE

OpenAI products FORBIDDEN

Excluded by client direction — they're a competitor. Applies to GPT, Whisper API, embeddings, all of it.

NOT ALLOWED

Claude (Anthropic) FORBIDDEN

Not usable here — the OAuth flow the client needs isn't permitted for Claude.

NOT ALLOWED

VOICE / AUDIO

Gemini native audio PREFERRED

Telegram voice message goes straight to Gemini — no separate STT call. Cheapest, simplest path.

NOW SOON

whisper.cpp OPEN SOURCE · SELF-HOSTED

Whisper reimplementation in C++, runs on CPU. Self-hostable fallback that avoids OpenAI entirely.

MID LATER

FRONT DOOR

Telegram Bot API FREE · OFFICIAL

Register bot via @BotFather. Webhook from Telegram to the VPS handles voice + text. No platform fee.

NOW SOON MID

MEMORY & STORAGE

Obsidian (self-hosted vault) OPEN FILE FORMAT

Markdown-on-disk inside the VPS. No vendor lock-in — files are portable.

SOON MID

SQLite / Postgres OPEN SOURCE

Structured data: users, jobs, generated docs. Postgres once multi-user lands.

SOON MID

DOCUMENT GENERATION

python-docx / docxtpl OPEN SOURCE

Templated .docx output for whitepapers. No license fees.

NOW

WeasyPrint / wkhtmltopdf OPEN SOURCE

HTML → PDF rendering for the .pdf deliverable.

NOW

SUB-AGENT RUNTIMES (MID)

Gemini API (Research + Code agents) HOSTED

The MID-phase Research and Code agents run on Gemini until self-hosted Kimi K2 / MiniMax are stable.

MID

INTERNALIZED LATER

Paperclip / OpenStack / OpenShift

WALLED GARDEN REPLACEMENTS

Listed on your whiteboard as the candidate stack to absorb inhouse. Open source, so the migration is feasible.

LATER FUTURE

FOUR CROSS-CUTTING BETS (LOWER HALF OF YOUR BOARD)

Hosting decision	**Hostinger VPS now → on-prem hybrid by 2028.** Hostinger carries the prototype and super-app launch — fixed monthly cost, no egress surprises. Cloudflare handles registrar + DNS. Proxmox/TrueNAS + hypervisors take over once revenue justifies owned hardware. "Saferoom within a house."
Walled garden	Rebuild every dependency inhouse over 12–24 months — Apple-style vertical integration. Paperclip, OpenStack, OpenShift get internalized rather than rented.
Agent harness	Chancellor (authority) → Secretary (intent) → Preacher (alignment) → Priest (rules) — every agent's Act.md defines its dos-and-donts. Delegation router fans work to Research and Code agents on Gemini.
Dependency stack	OPENCLAW · Hostinger · Cloudflare · Gemini · MiniMax · Kimi K2 · Paperclip · OpenStack · OpenShift — the current external stack. Each becomes a candidate for inhouse replacement once the walled garden lands.

Links to every dependency

Every external service, vendor, and tool referenced anywhere on this page — grouped by category, with the official source.
